

Pasta with Bolognese sauce

A recipe, seen as a program: variable

1. Cook the pasta

Variables

Let's choose fusilli for our pasta

→ pasta cooked

=

then

if

=

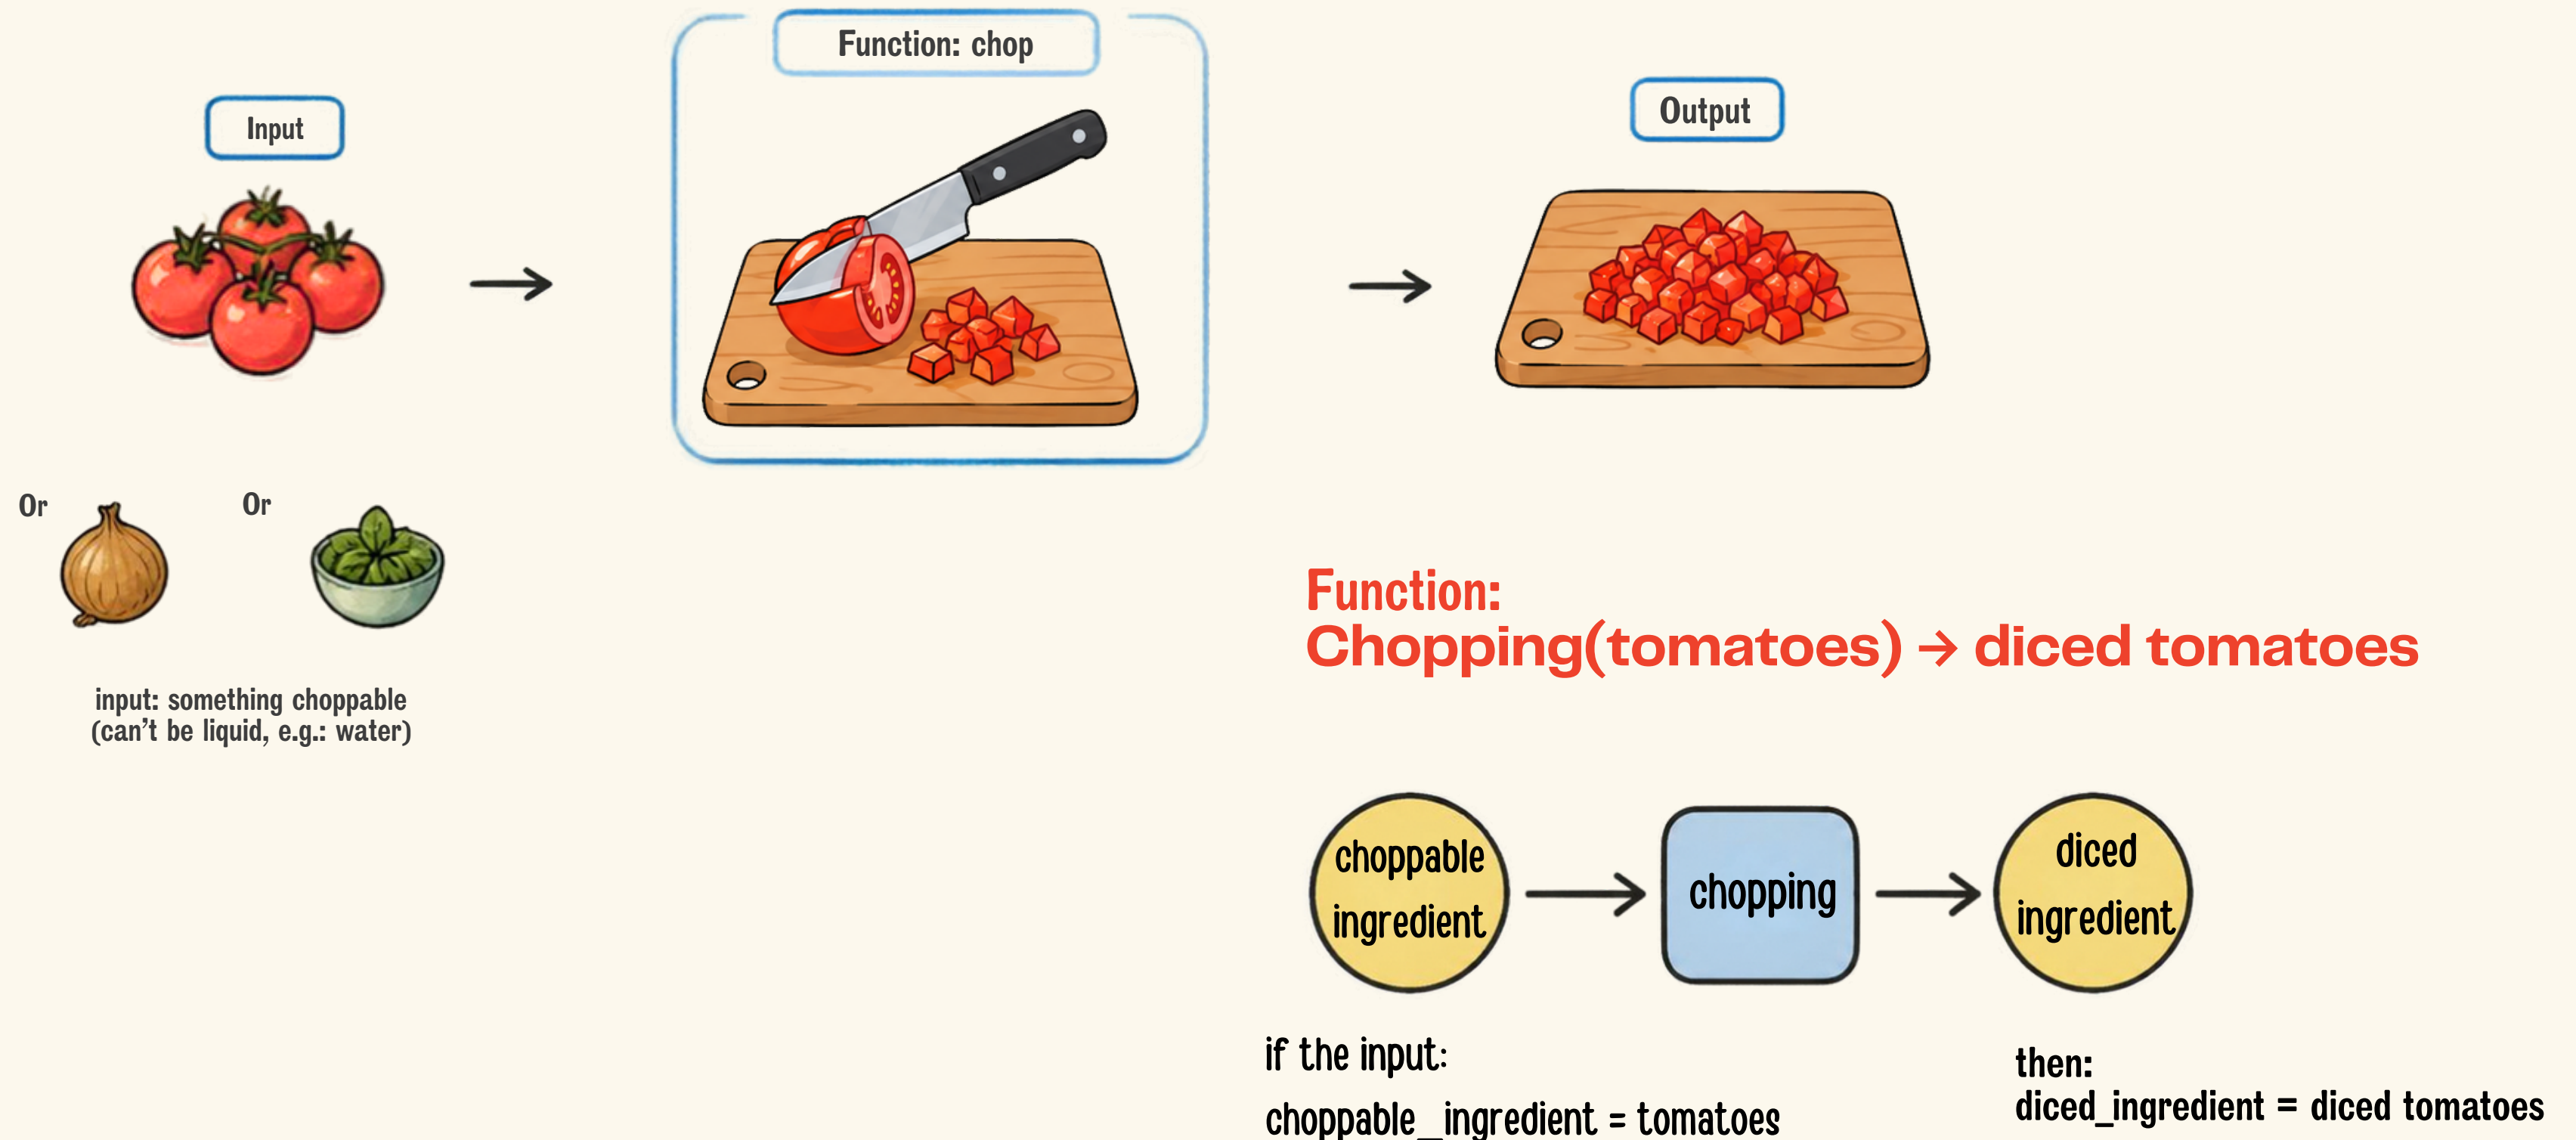

then

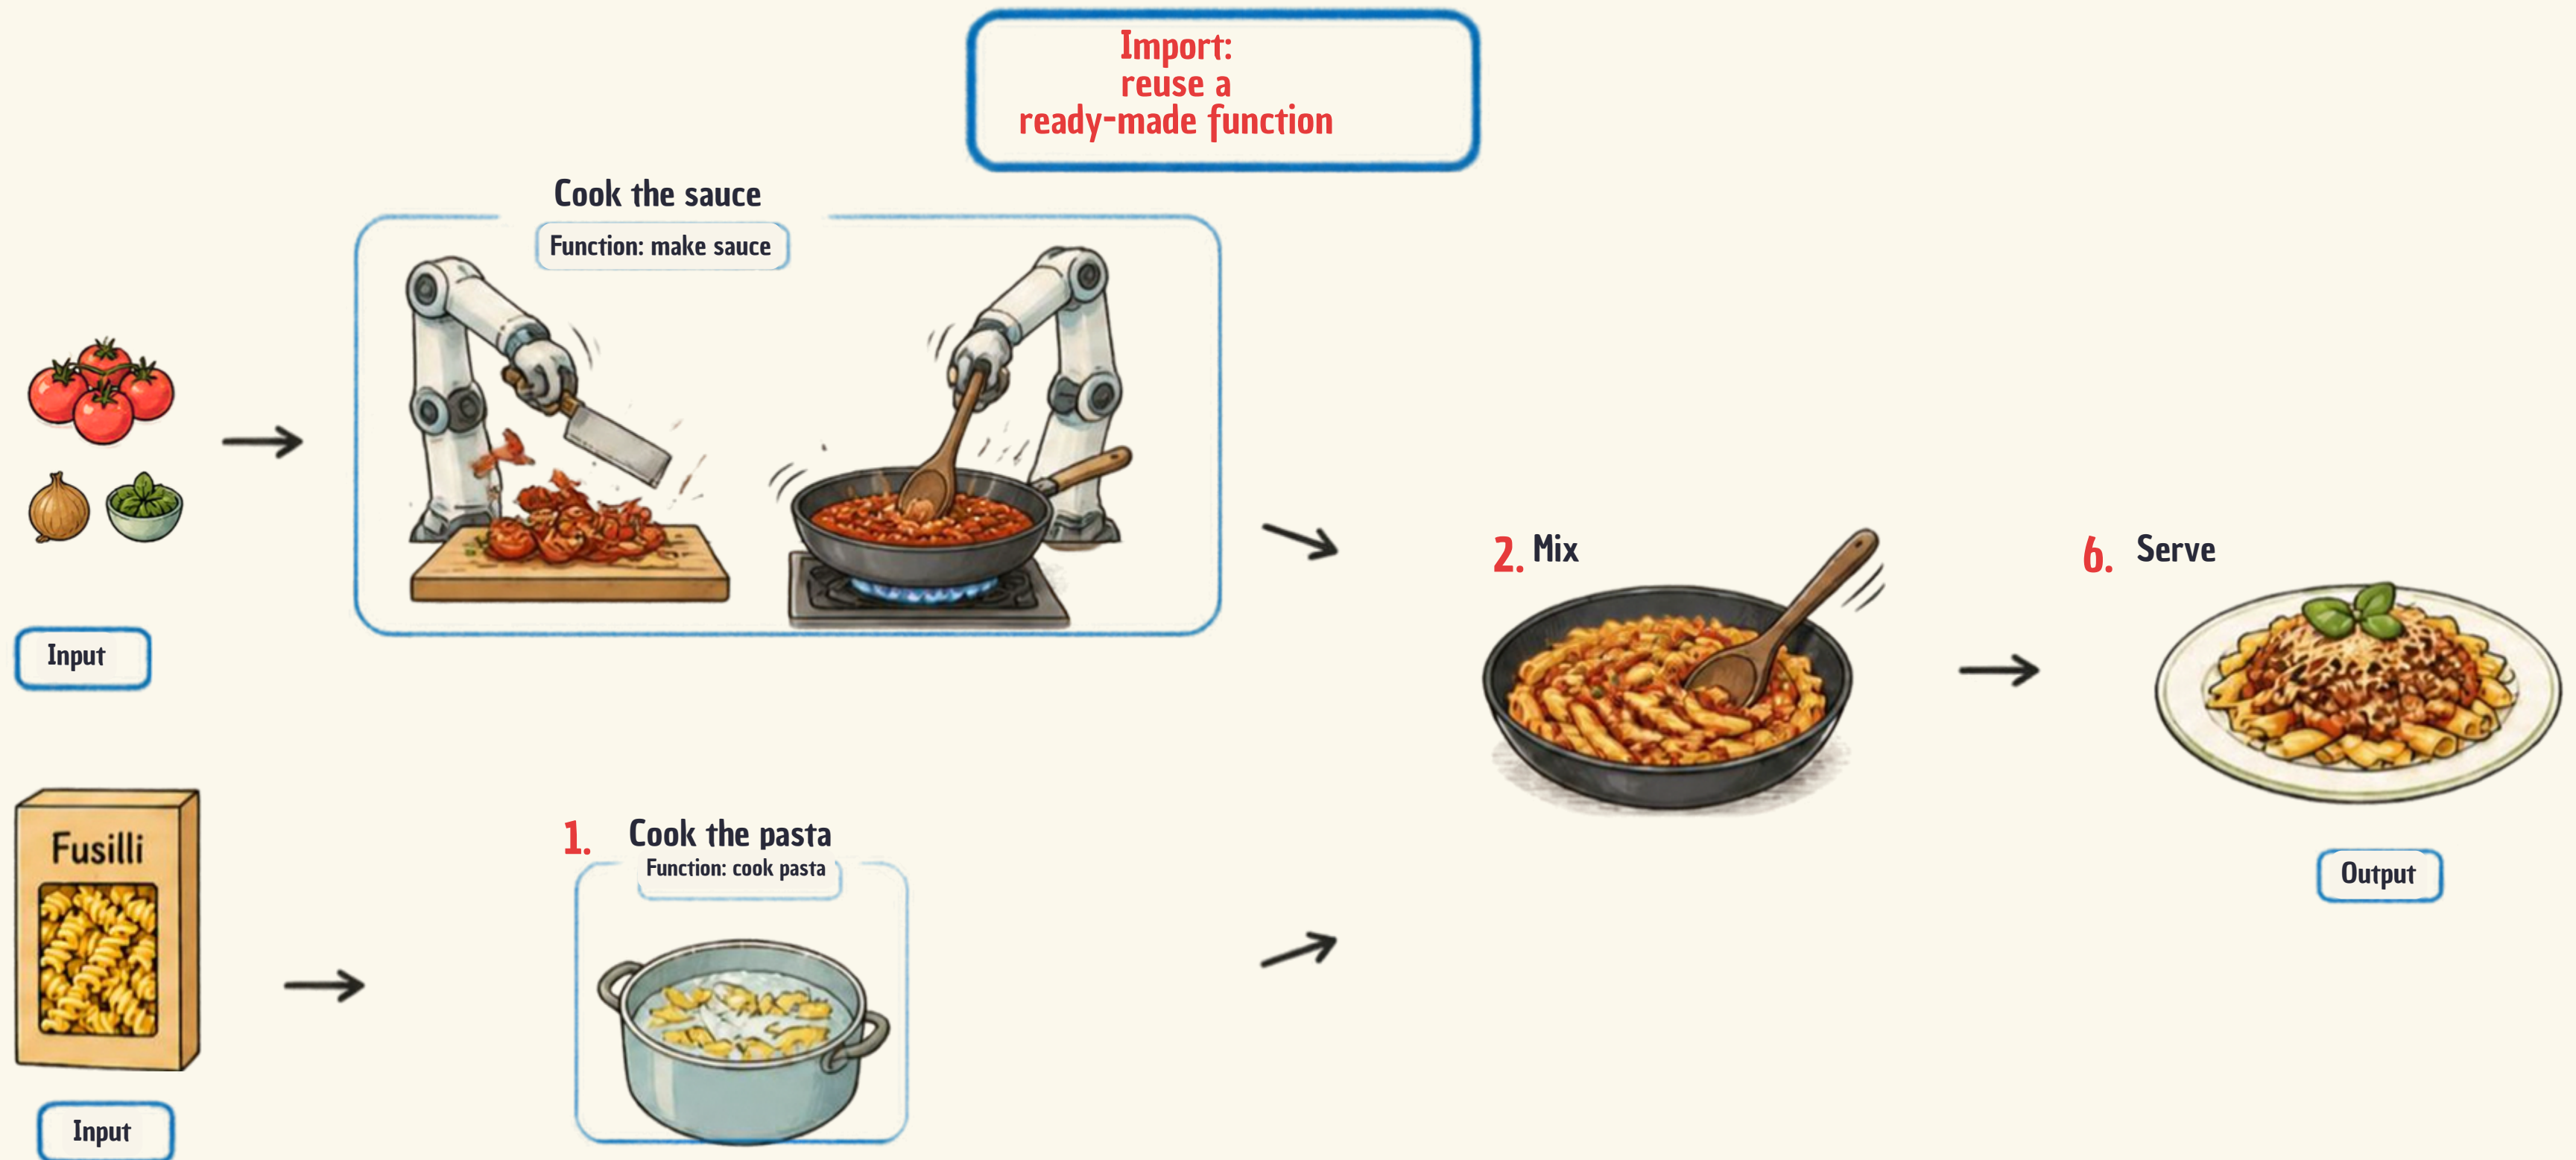

A recipe, seen as a program: function

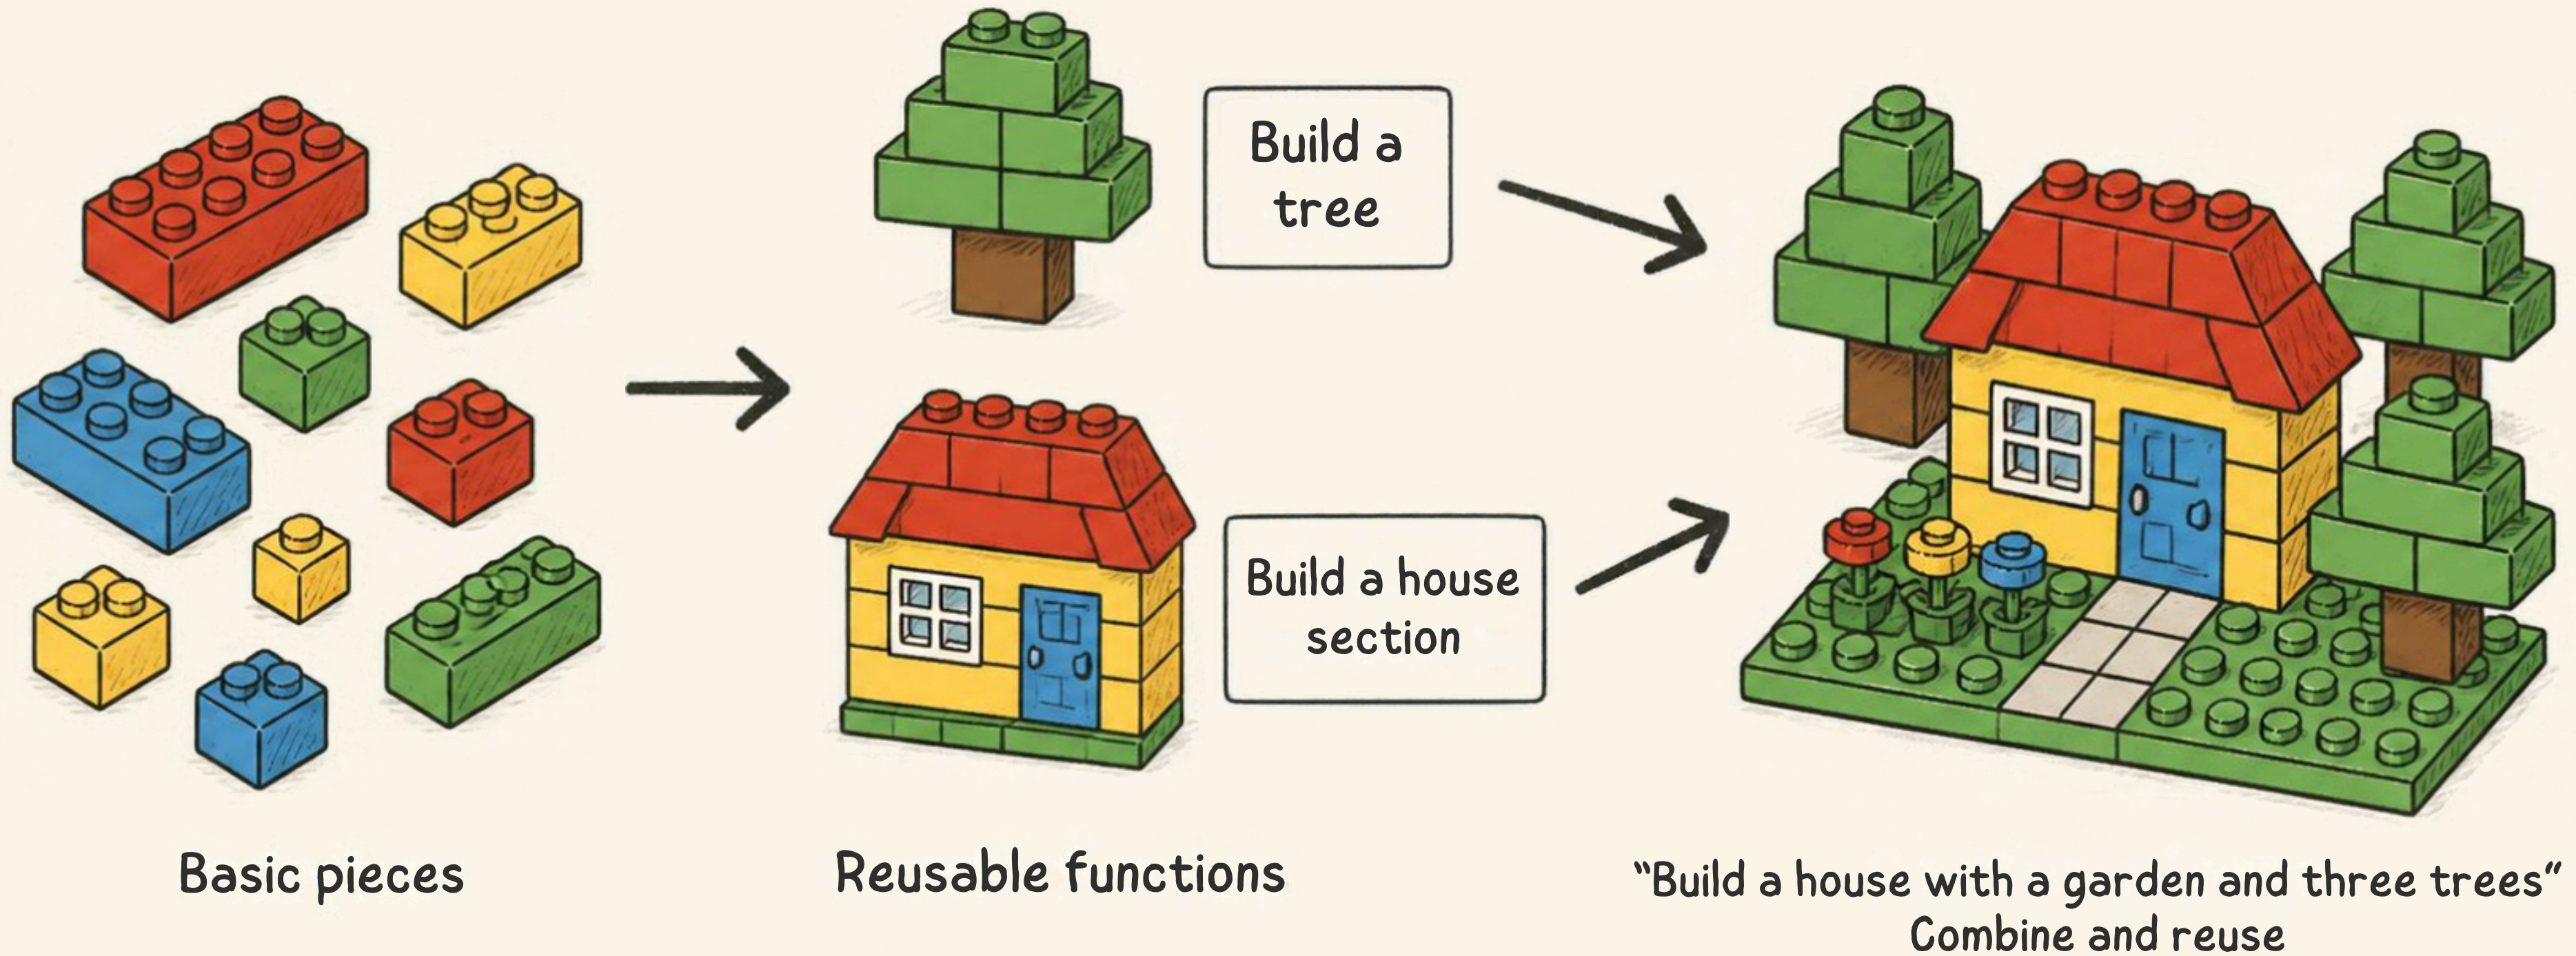

2. Chopping tomatoes

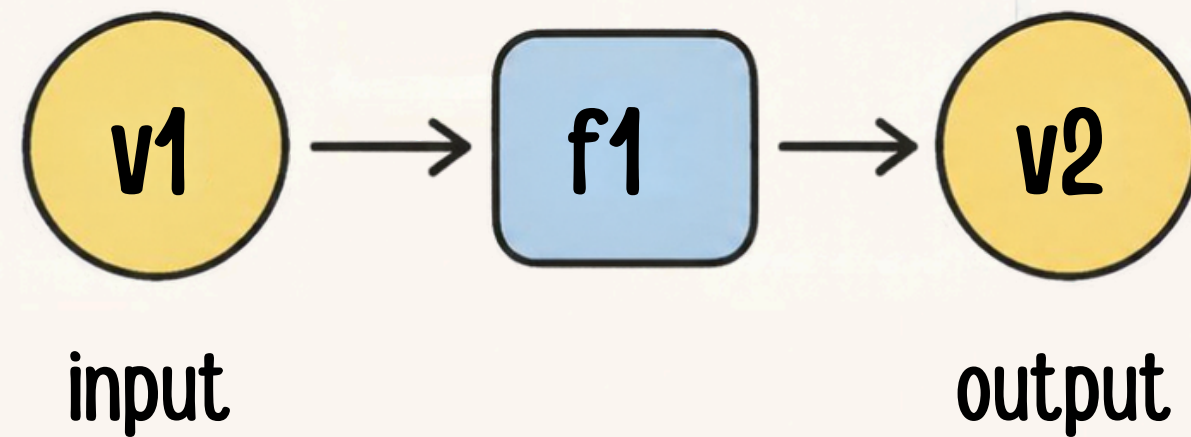

A recipe, seen as a program: import

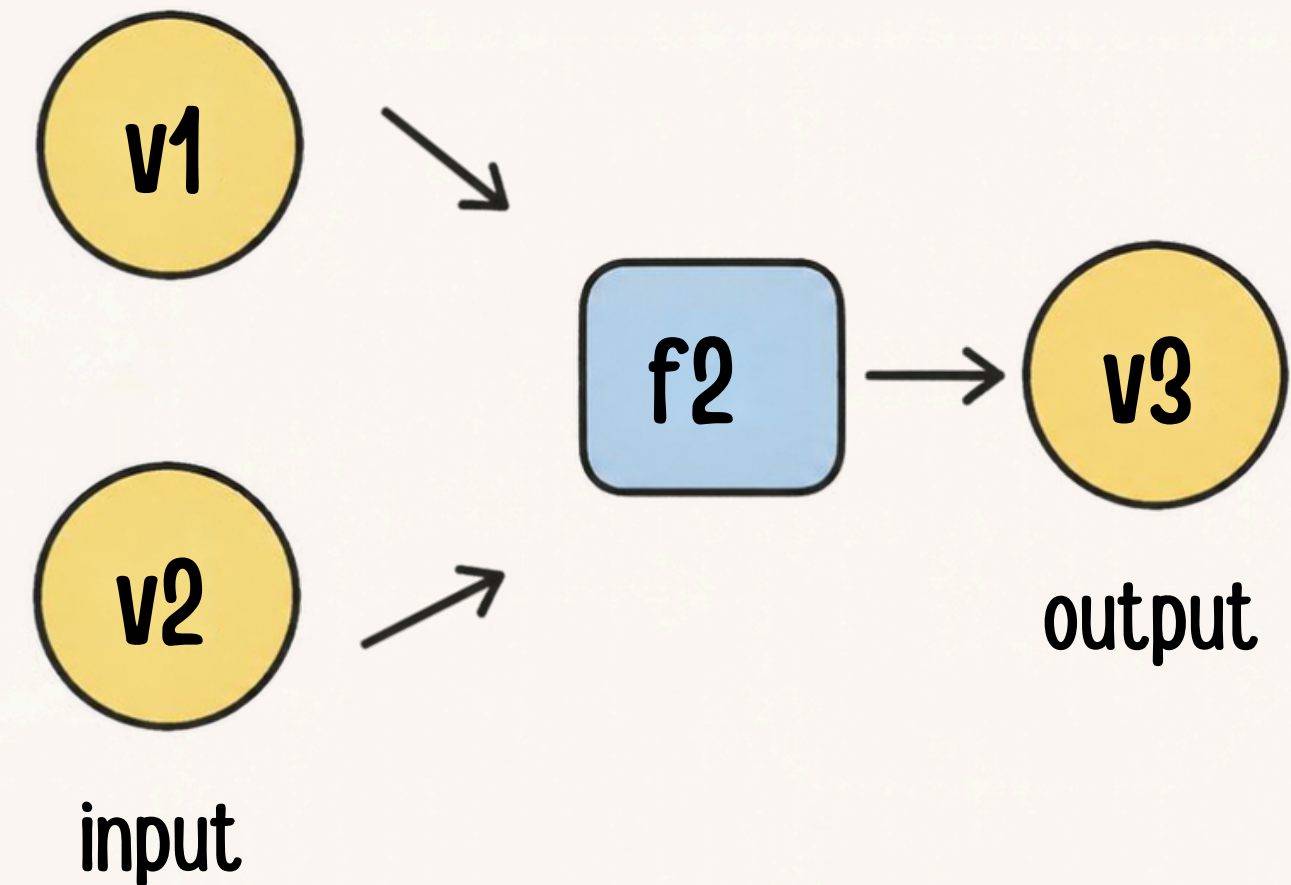

Build once, reuse

Abstraction to programming diagrams

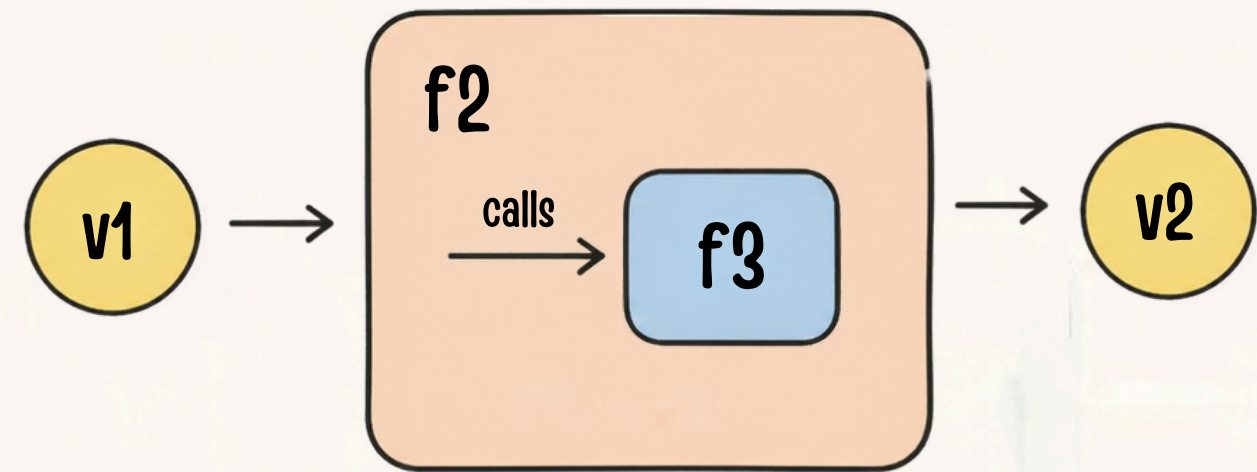

raw pasta → boil → cooked pasta
25 °C → convert → 77 °F

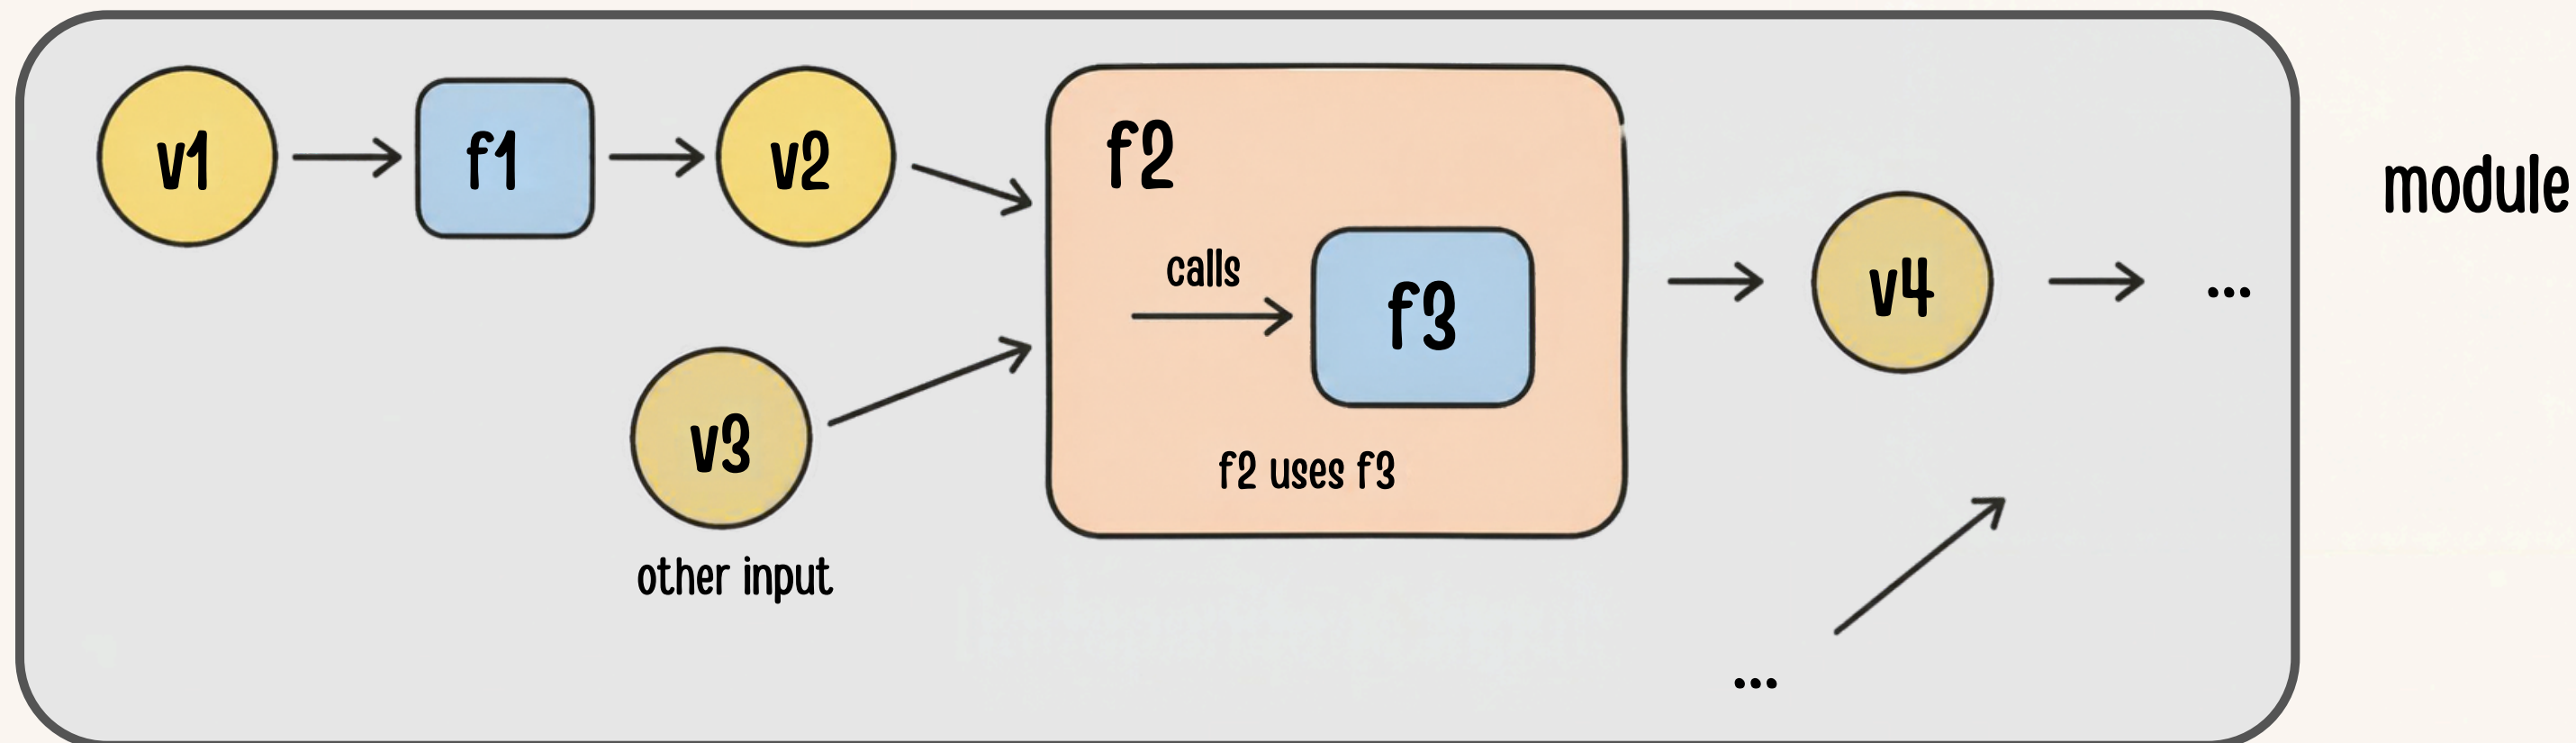

tomatoes → cook → Bolognese sauce
minced beef ↗

Functions can work together(1)

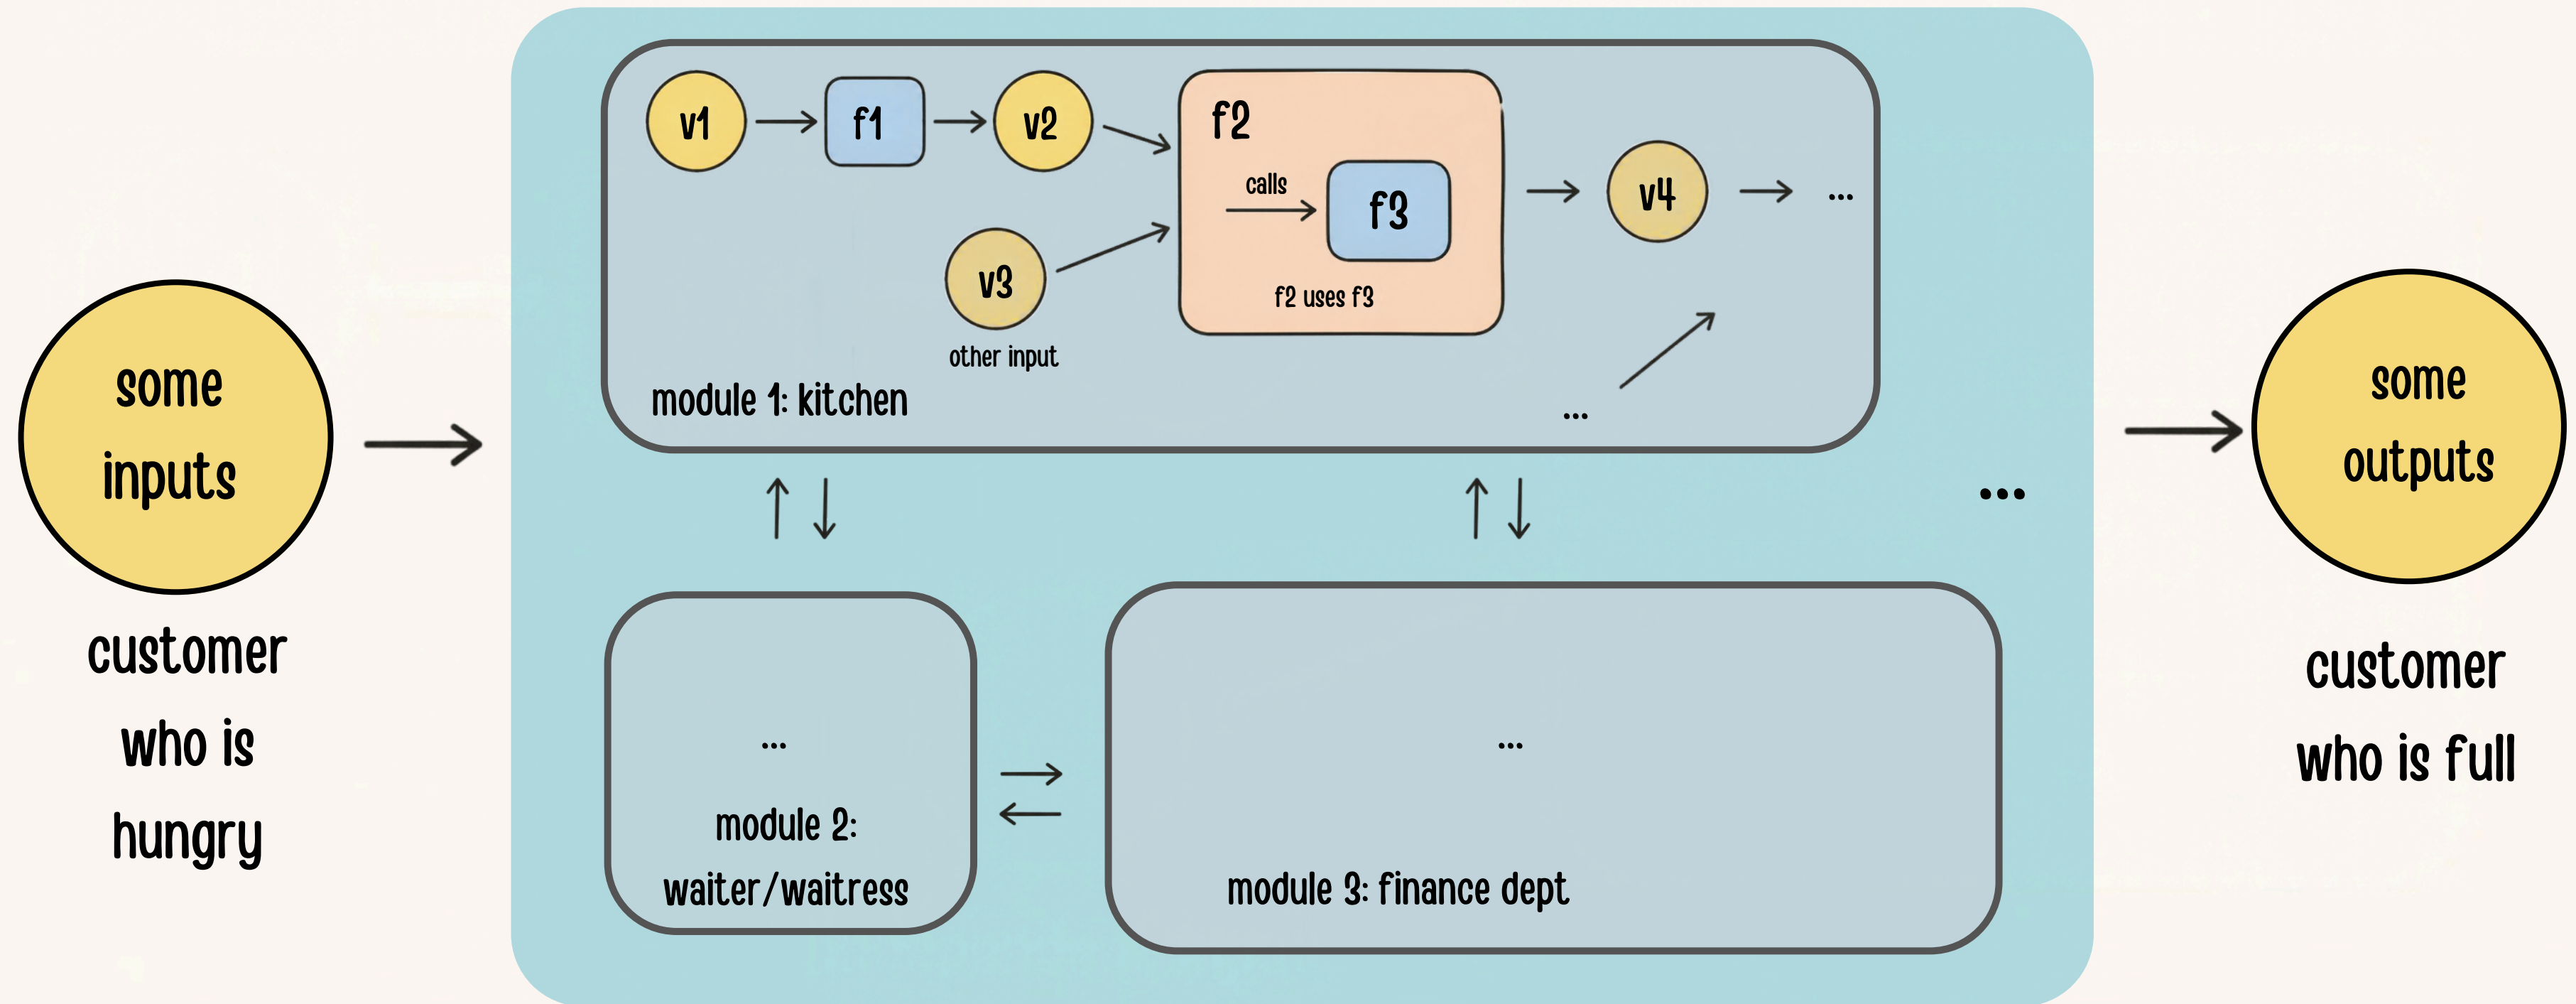

f2 uses f3:

The chef (F2) cooks a dish (v2), his assistant (F3) is chopping all the ingredients for him during the cooking

Functions can work together(2)

combine modules together to make more powerful softwares
